Business Solution

Track, monitor, and manage

Configure automatic reactions upon movement detection to deter theft, and gather evidence to identify the thief. Or set up timed actions, like curfew locks to avoid usage out of office hours.

Monitor on-site and off-site devices seamlessly.

Organize your laptops, tablets, and mobiles in groups, see their status and position, and detect unwanted movements with geofencing.

Add an extra layer of data privacy compliance.

Make sure your fleet is ready to protect its data safety compliance against incidents that may put legally bound private data at risk using the platform's custom wipe and file retrieval tools.

WHY COMPANIES CHOOSE PEDATOR

Simplified Management

Assign devices to employees, easily group them by usage, hardware, or area, and keep track of any hardware changes or odd behaviors like devices that have been offline for a while.

Advanced Tracking

Monitor your fleet's location in time, check on your remote workforce's devices, and delimit Control Zones for on-site devices to detect unwanted movements.

Reactive Security

Ensure your company is ready to protect devices in movement with automatic triggers that react to theft or movement. Anti-theft will block and track your assets, while our data protection will help save key data.

Protect Device & Data

Secure devices with anti-theft actions, and avoid data loss with the file recovery and wipe features.

Tracking & Location

Track the whereabouts of laptops, tablets and mobiles, and make sure those that shouldn't be taken off site stay in their place with Control Zones that alert exits or entries.

Tracking Preferences

Active tracking with movement detection and periodic checks, or on-demand locations.

Control Zones Geofencing

Active tracking with movement detection and periodic checks, or on-demand locations.

Tracking By GPS, WIFI Triangulation, GEOIP

Easily see your entire fleet's location at once with the global map view.

Location History

Check for suspicious past positions, or find patterns when looking for a lost device.

Global Device View

Easily see your entire fleet's location at once with the global map view.

Device Security

When a device is lost and out of your reach, react with security actions to protect and recover your organization's assets, avoiding anyone from accessing it.

Remote Screen Lock

No stranger's hands will access your phone, tablet, or laptop if you remotely lock it.

Message Alert

Not all losses are theft, and not everyone's a thief, try contacting the current device holder.

Anti-Mute Alarm

Your device will make a 30-second racket that can't be silenced to help you locate it.

Control Zone Action

Configure automatic actions, like the lock, alarm, and alert, for when a device enters or exits a specific Control Zone.

Data Security

Protect your own, and your organization's data with a set of data protection tools that's ready to wipe confidential information and usage data, or retrieve specific files.

Remote Wipe*

Delete cookies, email data, documents, local cloud storage files, and custom directories on lost devices.

*Directory selection varies depending on the OS.

File Retrieval

Not all losses are theft, and not everyone's a thief, try contacting the current device holder.

THE BUSINESS PLATFORM

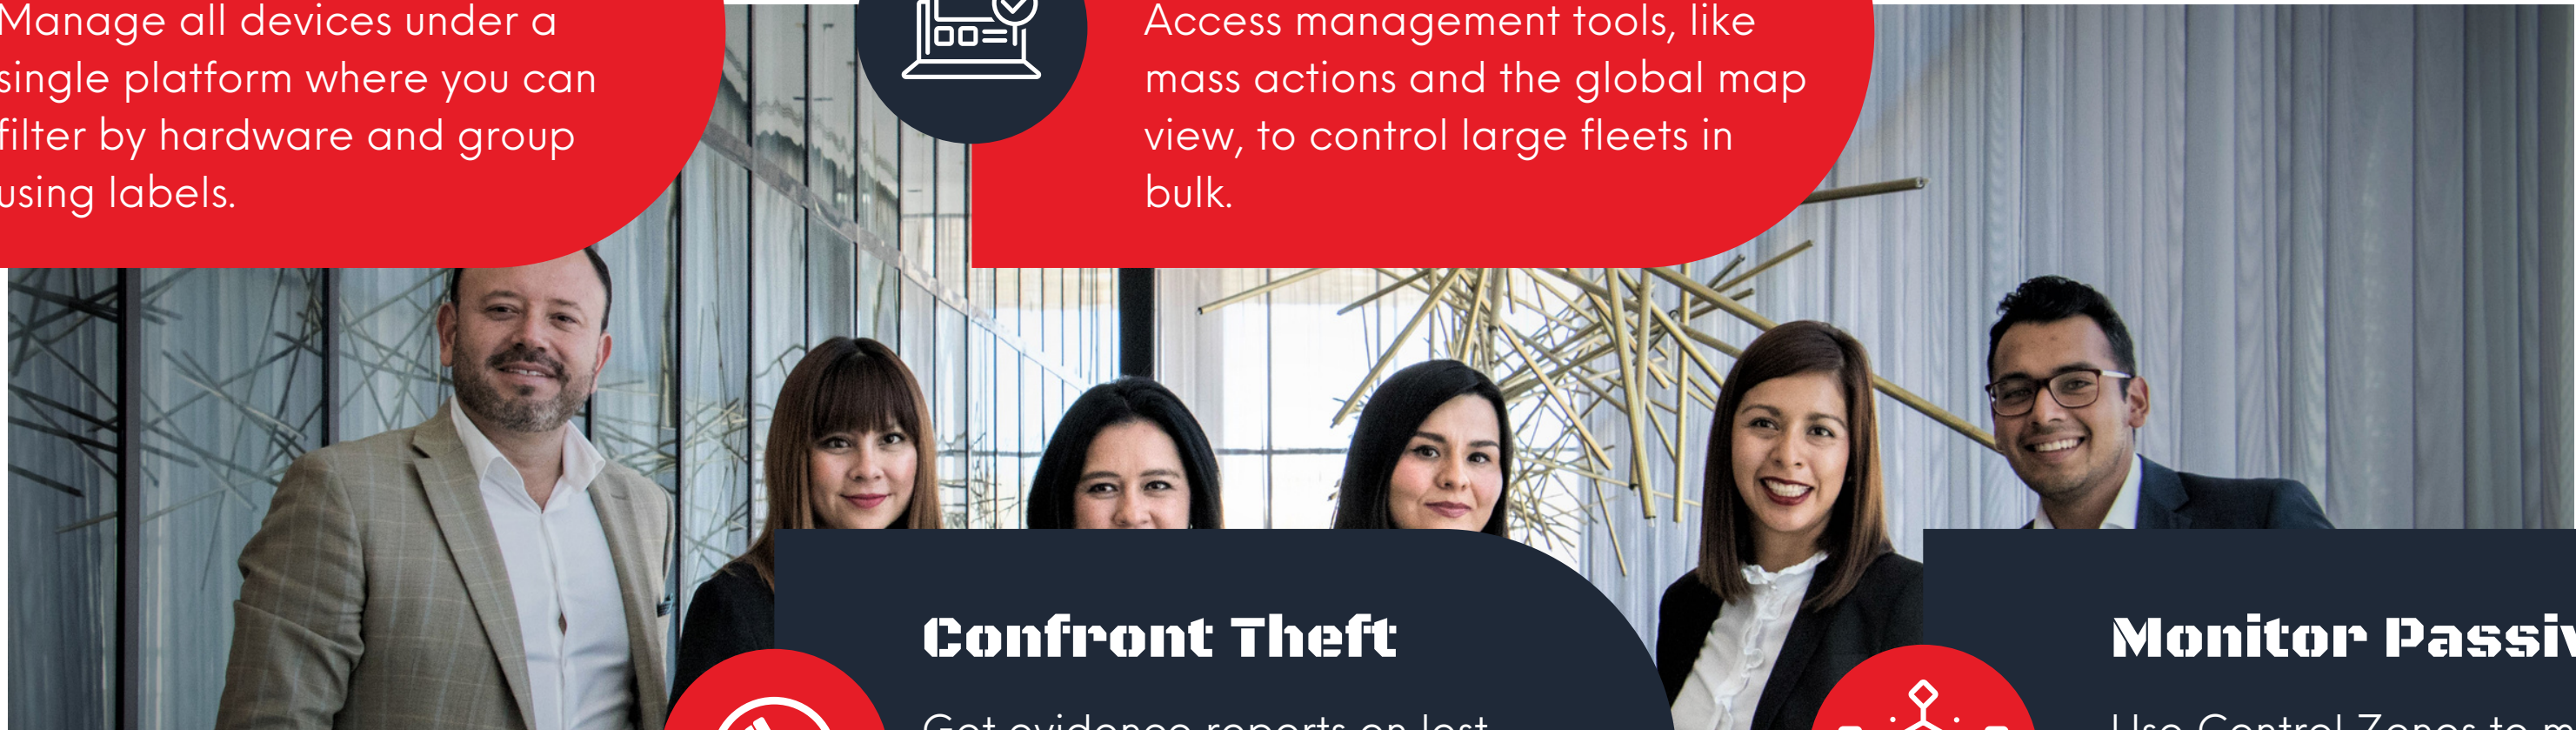

Unify & Organize

Manage all devices under a single platform where you can filter by hardware and group using labels.

Control Your Fleet

Access management tools, like mass actions and the global map view, to control large fleets in bulk.

Confront Theft

Get evidence reports on lost devices for the police, which include nearby WiFis, locations, pictures, and more.

Monitor Passively

Use Control Zones to monitor device movement in areas and the location history to detect odd locations.
